The iscreenworld® Touch Screen Advertising and Information Kiosk

The Instant, interactive iscreen touch is robust. Travellers touch your "Menu Button" it opens your large (16" x 14 1/2") "Landing Page" which has a menu bar across the top with touch buttons for Video, Map, Phone Call and Close. When each button is touched the active command begins and the customer is engaged. Travellers are also provided with GOOGLE 411 information to get texts with contact info and a link to map with directions.

On the right side of the Menu Section is the large Rotating Display area. Here your Promo will be rotated equally with the other participants, averaging 6 times per hour. Below the Rotating Display area is the local weather and seven day forecast. Below the weather is the time and date.

You receive yearly reports from the computer server with the exact number of interactions per command from your advertising.
